

SmartVent Lite+

Overview

SmartVent Lite+ is a home ventilation system that monitors both temperature conditions and humidity to ensure that you are protecting your home or rental property with quality air always circulating and keeping the property dry. As a temperature and humidity based solution, in winter, SmartVent Lite+ not only introduces air faster when warmer and slower when cooler, the system also measures the moisture content in the home and of the incoming air and uses this data to reduce under or over ventilation. The rental lock feature enables a property owner to lock the controller to prevent tenants from switching the system OFF while still allowing system temperatures, fan speeds and ventilation scheduler adjustments to suit the lifestyles/needs of the occupants. Low temperature protection, set at a user adjustable default setting of 5°C, ensures that continuous cold air is not introduced when the incoming air conditions are too cold.

SmartVent Lite+ Range

Home ventilation system suitable for most types of homes.

| Model | Description | Order Code |
|--------|---|------------|
| SV01L+ | 1 room system (expandable to 3 max.) for homes up to 100m ² | FAN7270 |
