

Backup Box

EEBACKUP-1PH

AUTOMATIC WHOLE HOUSE BACKUP FOR SINGLE PHASE SYSTEMS

Power outages happen. EEBACKUP-1PH is designed to keep homes running by enabling battery backup supply through the inverter, automatically and safely.

HOW IT WORKS

-  The Backup Box works alongside the single phase Entelar Energy inverters (EESOLAR-L1 and LC0 series) to enable access to stored battery power during a grid failure.
-  When an outage is detected, it co-ordinates with the inverter to safely isolate the site and continue supplying energy to essential loads.
-  This interaction happens automatically within 3 seconds, with no manual switching or operational intervention required.
-  Rated for 63A backup output, the Backup Box provides the capacity required for whole house or high demand backup installations.

KEY SPECS

-  Single phase rated up to 63A
-  <3 second automatic switchover
-  Compatible with EESOLAR-L1/LC0 single phase inverters
-  Modern, sleek new design
