

CLIPSAL®

2000H3 DRILLING TEMPLATE

Use with
2157H3G Gauge

Step 1: Using Cardboard template as a guide, cut out hole to fix Clipsal 2000 Series Gridplates.

Step 2: Connect wires to individual products.
Note: to comply with Standards, Clipsal 90B shroud(s) may be required to separate data/TV from power circuits.

Step 3: If either Clipsal 2155PH3 wall bracket or 2157H3 series wall box have been used, connect individual 2000 Series Gridplates to appropriate fixing positions. If either of these mounting accessories have not been installed prior to wall fitment, it is recommended to use Clipsal 2154H3 mounting clip to secure individual Gridplates. Note: before fully tightening Gridplates ensure all Gridplates are level. (Use 2157G metal gauge provided to assist)

Step 4: After fully tightening Gridplates, clip on 2000H3 surround.
